

Acrylic tubing bends vs butyrate bends

- Busada
- Tuesday, November 22, 2016

Do not use acrylic tubing bends! We received a package in the mail today. We were asked to please "make two more like these." The broken bend was acrylic, and thus, it came in in fragments. We did our best to reconstruct it, but with a wall that varied nearly .030", distorted tangents, and out of round OD, we gave our best guess.

Notice the yellowing; it lacked UV stabilization.
